SHARATH B P

Software Engineer

sharathbp@outlook.com sharath-bp sharathbp

About

Experienced Full Stack Engineer with a track record of delivering dynamic web applications. Passionate about building real world systems, learning new technologies and contribute to open source.

Experience

Software Development Engineer @ AWS

Oct 2022 – Present Bangalore, IN

- Worked on Aurora Global DB write forwarding project which helps customer to perform DML queries from the mirror cluster. Increased the performance of the DML write forwarding queries by 41% by batching queries in pipeline mode.
- Continuously improved the infrastructure by migrating the Infrastructure as Code *IoC* package from python API based to Live Pipeline Template *LPT* framework. Automated management of release pipeline and design of infrastructure.
- Automated the build validation workflows and performance testing of APG engine before releasing to each region.
- Lead the Aurora new region build automation which eliminated 7-14 days manual effort for building APG in new region. Co-ordinated with Control Plane, Storage and RDS teams across timezones to ensure smooth and timely delivery.

Software Development Engineer @ Amazon

Oct 2021 – Oct 2022 Bangalore, IN

- Migrated the Subscribe And Save edit subscriptions widgets from legacy Gurupa framework to Java Servlets Horizonte framework. Setup Weblabs for A/B testing the customer experience with the migration.
- Mentored intern in the design and development of search subscription feature in Manage Your Deliveries (MYD) dashboard.

Software Developer @ OneDirect

Jan 2020 – Oct 2021 Bangalore, IN

- One Direct is a leading Customer Experience Management Company that is used by over 100 large Enterprises in India.
- Built and shipped *Mobile Gateway* for handling of Mobile App requests. Monitored API performance via Telemetry.
- Contributed to the implementation of the Email Recall feature within the Service Cloud dashboard, empowering customers to retract emails sent within a specified timeframe. Utilized Celery, a task queue, for scheduling email actions, and implemented cron for automatic resending in case of failure. Employed Faye for socket connection with the user interface to display real-time email status updates.
- Designed and executed the Feedback Cloud Analytics Dashboard within a React Native Mobile app.
- Successfully crafted and delivered the *Android SDK* for Feedback Cloud, enabling seamless integration for brands seeking customer feedback through their mobile applications.
- Developed the Bot Analytics UI in Angular, a novel product designed to showcase analytics for conversations conducted by Chat Bots in the Messaging Cloud. Leveraged D3 to create custom graphs.

Software Developer Intern @ Flintzy

July 2019 – Aug 2019 Bangalore, IN

- Flintzy is a global YouTube promotion platform which helps YouTubers grow their channel.
- Developed *Sales Analytics Dashboard* using Django framework which is used to view the sales details of the company.
- Set up the company blog website in *AWS* using Wordpress templates.
- Developed *Bulk Email Sending Service* using *Amazon SES* in *Java Spring Boot* to send order acknowledgment to customers.

Skills

Programming Languages

Java • JavaScript(ES6) • TypeScript • C/C++ • Python • HTML • Swift • Ruby • CSS/Sass

Libraries & Frameworks

Spring • Django • Celery • Faye • Express JS • Android Studio • React Native • Angular • React • gatsby

Tools & Platforms

Docker • PostgreSQL • Rabbit MQ • Kafka • MySQL • Cassandra • SQlite • MongoDB • Git • Firebase • Gulp • xcode • Webpack

Education

Bangalore Institute of Technology

Bangalore, 2020

Bachelor in Computer Science Engineering.

GPA: 8.57

Vidhya Mandir Ind. Pre-University

Bangalore, 2016

Courses: Physics, Chemistry, Mathematics, Computer Science.

Percentage: 93

Achievements

E-Yantra 2018

Qualified for Stage 2. Theme: Chaser Drone.

GE Hackathon

Built Chatbot for booking appliance service.

Courses

Deep Learning Specialization

Coursera

Machine Learning

Coursera

Languages

English • Hindi • Kannada

Interests

BasketBall, Travelling, Hiking, Guitar, Music

Projects

Caricature Generator - Capstone Project B.Tech

- Developed a system utilizing Generative Adversarial Networks (GANs) for the creation of caricatures.
- Utilized Python scripting to preprocess the dataset, focusing on detecting facial features within the images. Extracted coordinates for the eyes, nose, and forehead to facilitate facial alignment, particularly beneficial for optimizing caricature generation processes.
- Produced mirrored images to augment the dataset, effectively increasing the volume of input data. This practice aids in regularization and enhances the performance of the model.

Faculty Feedback System

- Orchestrated the creation and implementation of a Feedback System tailored for gathering teacher feedback within the computer science department of my college.
- Employed MySQL database management to ensure durable data storage, leveraging JDBC drivers for seamless database connectivity, and harnessed Java Swings to craft an intuitive user interface.
- Contributed to database design and authentication protocols, enhancing system security and reliability.

Real Estate Website

- Developed a real estate website as part of the Web Development course during my B.Tech program, utilizing PHP, HTML, and CSS.
- Engineered a robust database structure to store diverse property details, implementing pagination for efficient data retrieval and incorporating filters to display tailored information.

War And Peace

- Developed a multiplayer 3D plane shooting game titled ”War And Peace” as part of the Computer Graphics course.
- Utilized OpenGL, a platform-independent graphics framework, to create the game, leveraging its API for rendering both 2D and 3D graphics.
- Implemented lighting, transformations, and shaders to enhance the realism of the game’s animations.

Paging Simulator

- Engineered a simulation to illustrate paging algorithms in operating systems, leveraging OpenGL and C++.
- Applied OpenGL concepts such as transformation and GLUI to facilitate user interaction and input processing.

Service Booking using chatbot(GE Hackathon)

- Engineered a chatbot utilizing Dialog Flow and Firebase, seamlessly integrated with Google Assistant, enabling customers to book servicing for their home appliances.
